

CleverLCD Touch Fusion

Integrated interactive LCD table/easel/whiteboard

Touch screen displays in education are commonplace since the adoption of interactive whiteboard technology. More recently schools have adopted touch tables as a new way for children to interact, collaborate and learn in class. However to date no product has effectively combined these two learning technologies that schools desire - until now...

The CleverLCD Touch *Fusion* is a little more than it appears. Using a unique tilting and rising stand it can rotate a large format interactive LCD display from a table to an interactive whiteboard then back to a table. Because it rotates it can easily be shared among classrooms, either as a table or interactive screen. The dual touch technology makes it ideal for enabling children to interact with each other, either through play or collaborative learning. With the in-built PC, set-up couldn't be easier - just plug it in, switch it on and off you go!

As with all the CleverLCD series the CleverLCD Touch *Fusion* features a tough metal bezel and toughened glass surface. The optical technology ensures precision control, and the anti-reflective screen eliminates any chance of distraction. The table height can be set at a level to suit most ages of child, and also to deter children using it as a seat.

The CleverLCD Touch *Fusion* is housed on a sturdy trolley base which, when the table is upright allows you to easily move it between classrooms, learning resource centres, seminar rooms - wherever you want it to be. Wheel locks are provided for security and stability. Because the in-built PC features wireless network, the only connection you need is to mains power.

Imagine a new way to interact with your students

...to instantly transform any learning space with an interactive table

... or maybe an interactive easel, ideal for disabled students

...or an interactive whiteboard sharing among the whole class

...imagine this in a single product

welcome to the world of the CleverLCD Touch Fusion...

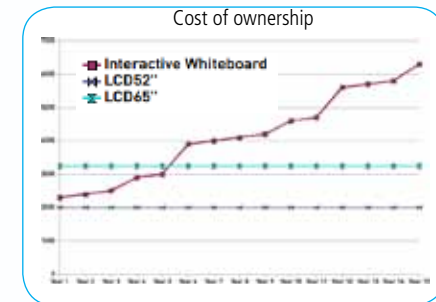

With an increasing amount of collaborative software being developed for Windows 7 based applications the CleverLCD Touch Fusion is an ideal way to use it in class with its flexible approach as a table or an interactive whiteboard. The large screen area makes it easy for two children to use, whilst others can gather around and work with them, involving more children.

A further use for the CleverLCD Touch Fusion is as a large screen interactive easel, ideal for children with disabilities. Setting the table at a comfortable angle for a wheelchair user being able to reach all areas of the screen without struggling because of the height, or depth.

LCD technology offers many advantages over the traditional whiteboard/projector combination. The high definition, high contrast display ensure that children are no longer struggling to view the content of the lesson – the classroom lights stay on, the blinds pulled back! The lack of any body shadow immediately gives confidence to the child/teacher ensuring no unwanted distractions, or difficulty in finding a comfortable stance. The extremely long lamp life ensures that your investment saves you money in the very short term, protecting school budgets going forward.

The CleverLCD Touch Fusion is backed up by a comprehensive 3 year warranty. On-site warranty that covers all parts and labour across the UK mainland is available and highly recommended. Routine maintenance is minimal with only the occasional glass cleaning required. The PC unit will be fully upgradeable once it is life expired, ensuring the investment in the LCD screen remains intact in years to come.

...children love to gather around the screen and collaborate on working through the problems displayed...

...we couldn't justify the cost of purchasing an interactive table alone, but the CleverLCD Touch Fusion can be used in so many ways and different areas...

...being in a wheelchair is no longer a restriction to using the interactive screen fully, the easel mode lets my students easily access all areas of the screen...
