

CleverLCD Touch

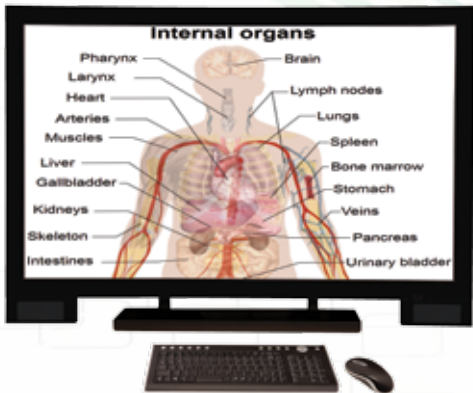

Integrated interactive LCD screen

The CleverLCD Touch Dual and Dual Plus are a range of large format interactive LCD displays ideal for the meeting room or ward station. A choice of 4 sizes are available from 42" to 65". All screens feature a high definition LCD display protected by a toughened 4mm glass surface. Using optical technology you can interact with the screen using your finger, supplied pen, or anything else to control the content. The unit is fitted with an all metal black bezel to enhance the protection and suitability for the meeting room or ward station.

Dual touch technology is rapidly becoming a way of life with the explosion of Smartphones, touch PC's and now interactivity in the meeting room. Dual touch is enabled by the Windows 7 operating system. Simple to operate, instantly adding a whole new dimension to engaging content in the meeting room or ward station, by zooming in on documents, images, web pages and videos. It is an easy way for the whole group to review key clinical data or enhance presentation bullet points, using the now very familiar finger pinching technique.

The CleverLCD Touch *Dual Plus* features the same high quality LCD display and also includes a powerful PC, mounted flush to the back of the panel. With a built in PC, installation and use couldn't be simpler. Hang the LCD on the wall or mobile trolley, switch on and use. The CleverLCD Touch *Dual Plus* is supplied with Windows 7 Professional pre-installed, so it is ready to go out of the box. The PC features twin Athlon processors, 250Gb hard disk, 4Gb of system memory, high definition graphics card, blu-ray DVD playback and a DVD re-writer, 6-in-1 card reader, wired and wireless network. Also supplied are powerful 15W speakers and wireless keyboard and mouse.

Imagine an interactive display

...where vital patient information is clearly displayed

...where staff can interact directly on the screen

...where interactive tele-conferences are held in high definition

...where you can share, review and interact with crystal clear, pin sharp clinical images

...where 24/7 operation is second nature with over 6 years continuous usage

welcome to the world of the CleverLCD Touch ...

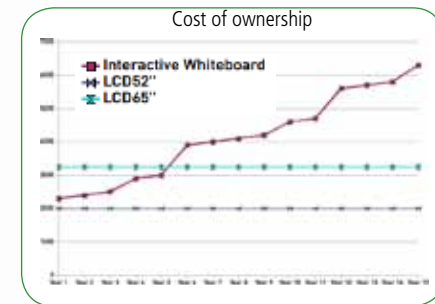

All CleverLCD Touch products are supplied with Lynx interactive whiteboard software. This fully featured application is equipped with all the popular whiteboard tools. It can be used as an interactive overlay to your popular business applications such as Microsoft Office, further enhancing your meetings and presentations. Lynx is supplied with a free upgrade licence, plus a free site licence so there are no restrictions on its use on any PC within the organisation. Training can be provided if required, though experienced whiteboard users will have no problems adapting to the familiar looking layout.

LCD technology offers many advantages over the traditional whiteboard/projector combination. The high definition, high contrast display ensure that staff are no longer struggling to view the content of the lesson – the lights stay on, the blinds pulled back! The extremely long lamp life and maintenance free operation ensures that your investment saves you money in the very short term, protecting NHS budgets going forward. The lack of any body shadow immediately gives confidence to the presenter/delegate ensuring now unwanted distractions, or difficulty in finding a comfortable stance.

The choice of sizes mean there is always a suitable size to fit both budget and room size. Furthermore the range of installation options with wall mounts, wall lifts, both mechanical and electrical, allow for lots of flexibility on installation. Alternatively the CleverLCD Touch *Dual* can be mounted on a mobile trolley, ideal for classroom sharing and breakout areas. The one time only callibration process saves valuable setup time and frustration, giving more confidence to staff to use.

The CleverLCD Touch *Dual* and *Dual Plus* are backed up by a comprehensive 3 year warranty. On-site warranty that covers all parts and labour across the UK mainland is available and highly recommended. Routine maintenance is minimal with only the occasional glass cleaning required. The PC unit will be fully upgradeable once it is life expired, ensuring the investment in the LCD screen remains intact in years to come.

...the long life continuous operation will save us considerable amounts of money not having to change lamps frequently, and save time too...

...it's perfect for the ward with its silent operation, minimising disturbance to patients at night, and reducing the risk of spreading infection...

...with maintenance free operation and extreme reliability we can be confident the screen is always going to be working 24 hours a day, 7 days a week, without interruption...
